Professional Summary

With a solid track record in the Java ecosystem, I work on developing robust back-end solutions that balance performance and scalability. My approach combines a strong foundation in Software Engineering with the agility needed to solve complex business problems. I am passionate about good development practices, ensuring high-quality deliverables through strategic versioning, a testing culture, and a continuous commitment to the evolution of software architecture.

Project Experience

FinanceAPI - GraphQL API for Financial Analysis | Java, Spring Boot | .Net, ASPNET core (rest)

- Developed a GraphQL API to process bank transactions and detect webhooks from financial aggregators via Open Finance.
 - Implemented a messaging system with Apache Kafka, ensuring asynchronous and scalable transaction processing.
 - Structured the project based on Clean Architecture principles and implemented custom exceptions to enhance maintainability.
 - Managed the PostgreSQL database, using Migrations for schema versioning.
-

MédiasAPI - REST API for Academic Grade Calculation | Java, Spring Boot | .Net, ASPNET core | NodeJS, NestJS

- Built a REST API to automate the calculation of academic grades from dynamic and complex formulas.
- Developed a custom formula interpreter using regular expressions and an adaptation of the Shunting Yard algorithm.

- Applied SOLID principles and the DTO pattern to ensure clean, robust, and easily maintainable code.
 - Configured the development environment with Docker, implemented route authentication with JWT, and documented the API with Swagger.
-

Education

Computer Science (Currently pursuing)
Federal University of Goiás (UFG)

Technical Skills

- Languages: Java, C#, TypeScript
 - Frameworks/Ecosystems: Spring Boot, .NET (ASP.NET core), Node.js (NestJS)
 - Databases: PostgreSQL, MySQL, H2 Database
 - APIs: REST, GraphQL
 - Tools and Technologies: Docker, Apache Kafka, Git, Swagger, JWT (JSON Web Token)
 - Architecture and Concepts: Clean Architecture, SOLID, Design Patterns, Object-Oriented Programming, ORM, Unit Testing, DTO (Data Transfer Object), Migrations, Exception Handling, Open Finance
-
