

Gustavo Henrique Pereira da Silva

Software Developer & Software Engineer

(62) 99128-1661 | gustavohenrique3gb@gmail.com | linkedin.com/in/gustavohpereiradev | github.com/GustavoDaMassa | GustavoHDev.com.br

ABOUT

Developer with 4 years of continuous practice building APIs and web interfaces focused on architecture and code quality. Projects in production with Open Finance integration, asynchronous processing with Kafka, Angular interfaces, and infrastructure as code with Terraform. Computer Science degree at UFG. Work across multiple ecosystems (Java, .NET, Node.js) with emphasis on concepts, not tools.

TECHNICAL SKILLS

Back-end:	Java, Spring Boot (Data JPA, Security), C#/ASP.NET Core, TypeScript/NestJS, REST APIs, GraphQL, Apache Kafka
Front-end:	Angular, React
Databases:	PostgreSQL, MySQL, MongoDB, Redis
Infrastructure:	Docker, CI/CD (GitHub Actions), Terraform, AWS
Tools:	Git, Swagger/OpenAPI, Flyway, JUnit
Practices:	Clean Architecture, SOLID, Design Patterns, Automated Testing, ORM, Migrations

EXPERIENCE

Independent Fullstack Developer — FinanceAPI

2024 – present

Java · Spring Boot · GraphQL · Apache Kafka · PostgreSQL · Docker · Angular

github.com/GustavoDaMassa/FinanceAPI · FinanceAPI.com.br

- Built a GraphQL application integrating with financial aggregators (Pluggy) to automatically capture and categorize bank transactions
- Implemented asynchronous webhook processing with Apache Kafka
- Developed a responsive web interface with Angular
- Structured with Clean Architecture, X-API-KEY authentication, and standardized error handling
- Production deployment with automated CI/CD (GitHub Actions → Docker Hub → self-hosted server)
- Reimplemented in .NET/ASP.NET Core as a cross-stack versatility exercise

Independent Fullstack Developer — MédiasAPI

2023 – present

Java · Spring Boot · JWT · MySQL · Docker · Swagger · Angular · Terraform

github.com/GustavoDaMassa/MediasAPI · MediasAPI.GustavoHDev.com.br

- Built a REST API for calculating academic grades with dynamic formulas, using an interpreter based on the Shunting Yard algorithm
- Implemented grade projection and academic scenario simulation
- Developed a web interface with Angular and JWT authentication
- Production deployment with infrastructure as code (Terraform) and automated CI/CD
- Reimplemented in .NET (C#) and Node.js (NestJS/TypeScript)

Independent Fullstack Developer — PriceWatch

2026 – present

C# · ASP.NET Core · MongoDB · Redis · Docker · Angular

- Built a product price monitoring platform with custom lists and an alert system
- Implemented caching with Redis to optimize frequent queries and reduce latency
- Developed an SPA interface with Angular Material and integrated authentication
- Production deployment with automated CI/CD and self-hosted server via Cloudflare Tunnel

EDUCATION

Bachelor's Degree in Computer Science (2022 – 2026)

Federal University of Goiás (UFG)

- Foundation in data structures, algorithms, software architecture, and databases
- Full compiler for the Goianinha language: lexical, syntactic, semantic analysis, and Assembly code generation (C)

OTHER PROJECTS

Project	Technology	Description
GoianinhaCompiler	C	Full compiler with Assembly code generation
ClassView	TypeScript, React	Visualizer for class relationships in a project
cleanMediasAPI	Java, Spring	Reimplementation of GradesAPI with Clean Architecture
MSFinanceAPI	.NET, ASP.NET	Reimplementation of FinanceAPI as a microservices system
