Summary

Back-end Developer with 3 years of continuous practice in Java and Spring Boot. Experience building personal projects involving REST and GraphQL APIs, Kafka messaging, Open Finance integration, and automated testing. Currently pursuing a Computer Science degree at UFG. Actively seeking my first professional role as a Junior Developer.

Technical Skills

- **Core:** Java, Spring Boot (Data JPA, Security), PostgreSQL, REST APIs, Docker, Git.
- **Also working with:** C#/.NET Core, TypeScript/NestJS, GraphQL, Apache Kafka, MySQL, Swagger/OpenAPI, Flyway, JUnit.
- **Practices:** Clean Architecture, SOLID, Design Patterns, Automated Testing, ORM, DTO, Migrations.

Education

B.S. in Computer Science (2022 – 2026)

Universidade Federal de Goiás (UFG)

- Solid foundation in data structures, algorithms, software architecture, and databases.
- Developed a full compiler (lexical, syntactic, semantic analysis, and Assembly code generation).

Technical Projects

FinanceAPI — Open Finance Banking Integration

Java, Spring Boot, GraphQL, Apache Kafka, PostgreSQL, Docker

[\[Link to GitHub\]](#)

GraphQL API that connects to financial aggregators (Pluggy) to automatically fetch, persist, and classify bank transactions.

- Asynchronous webhook processing using **Apache Kafka**.
- Smart transaction categorization with filters by period, type, and category.

- **X-API-KEY** authentication and standardized error handling.
- Layered architecture following **Clean Architecture** principles.
- *Versatility Exercise*: Re-implemented the core logic in **.NET/ASP.NET Core**.

MédiasAPI — Academic Management with Dynamic Formulas

Java, Spring Boot, JWT, MySQL, Docker, Swagger

[\[Link to GitHub\]](#)

REST API that automates academic grade calculations based on customizable mathematical formulas.

- Formula interpreter based on the **Shunting-yard algorithm** with Regex.
- Grade projection and academic scenario simulation.
- **JWT** authentication, Swagger/OpenAPI documentation, and JUnit testing.
- Containerization with **Docker** and schema versioning with Flyway Migrations.
- Re-implemented in **.NET (C#)** and **Node.js (NestJS/TypeScript)**.

Other Projects

Project	Tech Stack	Description
GoianinhaCompiler	C	Full compiler with Assembly code generation.
SimplifiedWallet	Java, Spring Boot	User-to-user transfer system with complex business rules.
AgendaToDo	Java, Spring Boot	CRUD API for task management (Simplify technical challenge).
CodinomeUoI	Java	XML/JSON processing with memory and file persistence.
HashTable	C++	Hash table implementation for Data Structures coursework.

DevBrain	Markdown	Personal knowledge base with 100+ docs on Software Engineering.
-----------------	----------	---

Key Highlights

- **Problem-Solver:** Each major project was built to solve a real-world problem, going beyond basic CRUD operations.
- **Tech Agnostic:** Implemented projects across 3 different ecosystems (Java, .NET, Node.js), demonstrating a deep understanding of core concepts over syntax.
- **Continuous Learning:** Maintain the **DevBrain** repository with 100+ documents covering everything from fundamentals to System Design.
