

Gustavo Henrique Pereira da Silva

Fullstack Developer | Java · Spring Boot · Angular

(62) 99128-1661 | gustavohenrique3gb@gmail.com | linkedin.com/in/gustavohpereiradev | github.com/GustavoDaMassa | GustavoHDev.com.br

ABOUT

Developer with 3 years of continuous practice building APIs and web interfaces focused on architecture and code quality. Production projects with Open Finance integration, async processing with Kafka, Angular interfaces and infrastructure as code with Terraform. Computer Science degree at UFG. Working across multiple ecosystems (Java, .NET, Node.js) with emphasis on concepts over tools.

TECHNICAL SKILLS

Back-end: Java, Spring Boot (Data JPA, Security), C#/ASP.NET Core, TypeScript/NestJS, REST APIs, GraphQL, Apache Kafka

Front-end: Angular, React

Databases: PostgreSQL, MySQL

Infrastructure: Docker, CI/CD (GitHub Actions), Terraform, AWS

Tools: Git, Swagger/OpenAPI, Flyway, JUnit

Practices: Clean Architecture, SOLID, Design Patterns, Automated Testing, ORM, Migrations

EXPERIENCE

Independent Fullstack Developer — FinanceAPI 2024 – present

Java · Spring Boot · GraphQL · Apache Kafka · PostgreSQL · Docker · Angular

github.com/GustavoDaMassa/FinanceAPI · FinanceAPI.com.br

- Built a GraphQL application integrating with financial aggregators (Pluggy) to automatically capture and classify bank transactions
- Implemented asynchronous webhook processing with Apache Kafka
- Developed responsive web interface with Angular
- Structured with Clean Architecture, X-API-KEY authentication and standardized error handling
- Production deploy with automated CI/CD (GitHub Actions → Docker Hub → self-hosted server)
- Reimplemented in .NET/ASP.NET Core as a technological versatility exercise

Independent Fullstack Developer — MédiasAPI 2023 – present

Java · Spring Boot · JWT · MySQL · Docker · Swagger · Angular · Terraform

github.com/GustavoDaMassa/MediasAPI · MediasAPI.GustavoHDev.com.br

- Built a REST API to calculate academic grades with dynamic formulas using an interpreter based on the Shunting Yard algorithm
- Implemented grade projection and academic scenario simulation
- Developed web interface with Angular and JWT authentication

- Production deploy with infrastructure as code (Terraform) and automated CI/CD
- Reimplemented in .NET (C#) and Node.js (NestJS/TypeScript)

EDUCATION

Bachelor's in Computer Science (2022 – 2026)

Universidade Federal de Goiás (UFG)

- Solid foundation in data structures, algorithms, software architecture and databases
- Full compiler for the Goianinha language: lexical, syntactic, semantic analysis and Assembly code generation (C)

OTHER PROJECTS

Project	Technology	Description
GoianinhaCompiler	C	Full compiler with Assembly code generation
SimplifiedWallet	Java, Spring Boot	User transfer system with business rules
AgendaToDo	Java, Spring Boot	Task management CRUD API (Simplify technical challenge)
CodinomeUol	Java	XML/JSON processing with in-memory and file persistence
